

Located in Sacramento, California Sprouts has been delivering quality fresh sprouts to customers in California, Nevada and Arizona for over 10 years.

All of our sprouts are grown to order, requiring our customer service team to be in close communication with customers to ensure accurate volume projections for optimum freshness and consistent availability.

Agriculture Practices

California Sprouts utilizes hydroponic growing practices to cultivate a wide variety of green sprouts and wheatgrass. Our growing practices ensure optimal environmental conditions and provide the perfect mix of water and nutrients for our plants, yielding the highest quality sprouts. We also utilize natural lighting to produce a consistently dependable sprout product.

Food Safety

Our food safety standards and outstanding quality have always differentiated us from other sprout growers. All seeds are put through a thorough wash process to protect against the possibility of microbial contamination on the seed itself. Then third party hold and release testing is conducted on all product lots before they are shipped out, ensuring the absence of both e coli 0157:H and salmonella.
